Lab 05 Contribution Journal – Data Preparation

For Lab 05, our group divided the work among the three team members so that each person was responsible for a specific part of the assignment.

****Joshua**** was responsible for completing the Lab 05 notebook. He worked through the Data Preparation exercises using the Titanic dataset, including handling the missing values in the Age column, applying One-Hot Encoding to the categorical variables, and using StandardScaler to scale the Age and Fare features. He also completed the Knowledge Check questions included in the notebook and made sure the required code cells produced the expected outputs.

****Marisabel Morales**** was responsible for the Reflective Journal. She reviewed the completed notebook and the results from each data preparation step in order to understand the concepts demonstrated in the lab. She developed the group reflection by connecting the work in Lab 05 with the previous Exploratory Data Analysis lab. The reflection focused on what the group learned about missing-value imputation, categorical encoding, feature scaling, and why different preprocessing decisions depend on the characteristics of the data and the type of machine learning model being used.

****Katherine**** was responsible for preparing the Contribution Journal. Her role was to document how the work for Lab 05 was divided among the members of the group and clearly identify the specific contribution made by each student.

Through this division of responsibilities, the group completed the three required components of the assignment: the Lab 05 notebook, the Reflective Journal, and the Contribution Journal. Each member had a clearly defined responsibility and contributed to the completion of the final submission.
